Professional Summary

Cybersecurity Engineer with **3.5+ years** of experience specializing in **Offensive Security, Red Teaming, Active Directory Security, Azure Security, Threat Assessments,** and **Security Automation**. Led **60+ enterprise red team engagements** across on-premise infrastructure, Active Directory environments, Azure cloud, and enterprise corporate networks. Identified and validated **150+ critical (P0/P1) vulnerabilities** including **Remote Code Execution (RCE)**, privilege escalation, authentication bypass, and cloud misconfigurations. Experienced in conducting large-scale merchant security assessments covering **100,000+ merchants monthly**, third-party risk assessments, integration security reviews, and enterprise security validation exercises.

Professional Experience

Information Security Engineer 2 May 2026 – Present
PhonePe *Bengaluru, India*

- Led **60+ Red Team** and adversary simulation engagements across on-premise data centers, **Active Directory**, Azure cloud infrastructure, and enterprise corporate networks.
- Identified and validated **150+ critical (P0/P1) vulnerabilities** including **Remote Code Execution (RCE)**, privilege escalation, authentication bypass, exposed administrative services, and cloud misconfigurations.
- Led office red team exercises involving phishing simulations, physical intrusion scenarios, stealth operations, and lateral movement testing.
- Conducted **100+ integration security reviews** for external vendors and partner ecosystems to validate authentication, authorization, API security, and secure data handling controls.
- Reviewed and strengthened enterprise **Data Loss Prevention (DLP)** policies and controls to improve data protection posture and regulatory alignment.
- Architected and developed **MIRA**, an internal merchant security posture assessment platform with automated audit workflows, **pytest-based validation**, SonarQube integration, and scalable reporting capabilities.
- Conducted **Breach and Attack Simulation (BAS)** exercises and EDR evasion testing to validate enterprise detection and response capabilities.
- Collaborated with engineering, compliance, and infrastructure teams to improve remediation effectiveness and enterprise security posture.

Information Security Engineer 1 Jul 2023 – Apr 2026
PhonePe *Bengaluru, India*

- Conducted security assessments for **100,000+ merchants per month** to evaluate external attack surface exposure, infrastructure weaknesses, and compliance risks.
- Performed **120+ Third-Party Risk Assessments (TPRA)** covering OAuth security flaws, SaaS integrations, insecure APIs, vendor security posture reviews, and access control weaknesses.
- Performed penetration testing across Linux environments, Active Directory, APIs, enterprise applications, and internal corporate infrastructure.
- Developed automation tooling for attack surface monitoring, vulnerability detection, password spraying simulations, and enterprise security validation workflows.
- Performed adversary simulations and offensive security assessments against enterprise infrastructure and cloud environments.
- Supported remediation validation and collaborated with engineering teams to strengthen enterprise security controls.

Information Security Intern Feb 2023 – Jun 2023
PhonePe *Bengaluru, India*

- Monitored PhonePe's internet-facing assets to identify exposed services, open ports, misconfigurations, and potential security risks.
- Used security tools such as Nuclei and other reconnaissance utilities to identify vulnerabilities and assess the security posture of external assets.

- Collected, analyzed, and prioritized external threat information to identify potential attack vectors and security exposures.
- Used Azure Pipelines to inventory internet-exposed IP addresses within an Azure subscription and investigate anomalous services and open ports, supporting recommendations for port closure and access-control improvements.
- Developed and maintained Python scripts to automate reconnaissance, vulnerability scanning, data processing, and security assessment workflows.

Technical Skills

Offensive Security: Red Teaming, Adversary Simulation, Penetration Testing, Active Directory Security, Azure Security, Attack Surface Management, EDR Evasion, Breach and Attack Simulation (BAS), Phishing Simulations, MITRE ATT&CK

Security Assessments: Third-Party Risk Assessments (TPRA), OAuth Security Reviews, Integration Security Reviews, Vulnerability Assessments, API Security Testing, Security Architecture Review, DLP Reviews

Cloud & Infrastructure: Azure, Linux Security, Windows Security, Active Directory, Networking, IAM, SaaS Security, Corporate Network Security

Programming & Automation: Python, Bash, PowerShell, Selenium, Pytest, Security Automation, SonarQube, Secure SDLC

Security Tools: Burp Suite, BloodHound, Metasploit, Nmap, Nessus, Wireshark, Mimikatz, Sliver C2, Azure Security Center, Defender for Endpoint

Security Domains: Threat Intelligence, OSINT, Malware Analysis, Incident Response, Vulnerability Management, Security Compliance

Certifications

- Certified Red Team Professional (CRTP)
- API Security Architect
- IBM Certified Cyber Security Analyst
- Fortinet NSE2
- Operationalizing MITRE ATT&CK
- Security Certified Network Specialist (SCNS)

Achievements

- Discovered and validated **150+ critical/P0 vulnerabilities** across enterprise environments and external attack surfaces.
- Led security assessments impacting **100,000+ merchants monthly** within large-scale payment ecosystems.
- Ranked **#12 globally** on TryHackMe.
- Achieved **Global Rank 750** on Hack The Box.
- Winner – Robotics Competition at IIT Gandhinagar.
- Winner – Codathon, BMSEC.
- 2nd Prize – Malware Analysis PBL Competition, BMSIT&M.

Projects

MIRA – Merchant Risk Assessment Platform

- Architected and developed an internal merchant security posture assessment platform for automated audit workflows and scalable security validation.
- Integrated **pytest-based testing** and SonarQube analysis to improve code quality, scalability, and audit readiness.

Attack Surface Monitoring Platform

- Developed automated tooling for identifying exposed assets, detecting vulnerabilities, and monitoring enterprise attack surface exposure.

Malware Analysis Utility

- Developed a terminal-based malware analysis utility using **Golang** for static malware analysis workflows.

Education

Bachelor of Engineering – Information Science and Engineering 2023
BMS Institute of Technology and Management *Bengaluru, India*
CGPA: **8.33**
